Summary

Backend + GenAI engineer with ~3 years shipping production systems in **Java/Spring Boot** and **Python/FastAPI**. Built LLM-powered reconciliation, RAG and agent workflows that run real business operations; currently on the founding team at Sponte, building a real-time AI sales assistant end to end, from LLM pipelines to AWS infrastructure.

Experience

Sponte **Apr 2026 – Present**
AI Engineer (Founding Team) *Bengaluru*

- Built **event-driven meeting-bot scheduling** (Recall.ai) from two sources: Google Calendar webhooks with a state machine and incremental syncToken sync for reschedules and cancellations, and forwarded invites via **Gmail API + Pub/Sub** with .ics parsing; deduplicated across Meet, Zoom and Teams, so bots auto-join with zero manual setup.
- Engineered core flows of a **real-time AI sales assistant**: idempotent mid-call product/deal switching that carries conversation context and isolates per-call state, plus automatic deal resolution from participant and calendar data.
- Replaced per-turn funnel-stage detection with a single post-call **LLM classification**, validated with ablation experiments to reduce LLM calls per conversation; added batch runs to the call simulator for offline pipeline evaluation.
- Integrated DeepSeek and Bedrock models via **LiteLLM** with per-org prompts; shipped AI pitch generation, SHA-256 dedup of training content, and SES-based meeting-minutes and deal-digest emails with org-customizable templates.
- Promoted **Terraform**-managed AWS infra (ECS, ALB, Secrets Manager, SES, S3) from dev to production, automated PostgreSQL migrations, and hardened background jobs with retries and leader-election-aware watch renewal; shipped **Electron** in-app updates (Windows MSI, macOS) with dev/prod channels and server-enforced minimum versions.

Freshmenu **Sep 2023 – Mar 2026**
Software Development Engineer · joined as intern (Sep 2023), converted to full-time (Jan 2024) *Bengaluru*

- Built an LLM-driven **financial reconciliation platform** (FastAPI, Next.js, SQL) that auto-detects payout mismatches across Zomato, Swiggy, Magicpin and Bitsila, replacing manual reconciliation.
- Designed an **LLM rules engine** (FAISS + open-source GPT models) that extracts reconciliation rules directly from partner-agreement PDFs, replacing manual rule setup for each partner contract.
- Engineered a **procurement automation** system using OpenCV invoice parsing and AI-based invoice-to-PO matching to reduce manual reconciliation.
- Led **ONDC integrations** (Magicpin, Bitsila) end-to-end: JWT-secured APIs and asynchronous order processing on **ActiveMQ**.
- Hardened **Java/Spring Boot** ordering services (MySQL, MongoDB) by fixing production timeouts and null-pointer failures to improve reliability; built backend services for kitchen-audit and HRMS modules.

Projects

Personal AI Agent | *Python, Ollama, ChromaDB, sentence-transformers* GitHub

- Fully local ReAct agent (plan–act–observe) with a decorator-based tool registry, ChromaDB long-term memory, sandboxed file/shell tools blocking path traversal and destructive commands, and backoff retries.

AI Agent for Academic Guidance | *FastAPI, LangChain, pgvector, OpenAI, AWS* GitHub

- Full-stack RAG system with tuned chunking, reranking, JWT auth and rate limiting; deployed on AWS EC2 with Docker, Nginx and GitHub Actions CI/CD.

Education

Indian Institute of Technology Madras – B.S. in Data Science and Applications **2022 – 2026**
Masai School – Full Stack Web Development (Backend: Java, Spring Boot, MySQL) **2022**

Technical Skills

Languages: Java, Python, SQL, JavaScript
Backend: Spring Boot, FastAPI, REST APIs, Microservices, ActiveMQ, JWT
GenAI / ML: LLMs, RAG, Agents, LangChain, LiteLLM, AWS Bedrock, Prompt Engineering, Evals, FAISS, pgvector, ChromaDB, Hugging Face
Data & Infra: PostgreSQL, MySQL, MongoDB, Redis, AWS (ECS, ALB, S3, SES, Secrets Manager), Terraform, Docker, GCP Pub/Sub, GitHub Actions
Frontend / Desktop: React, Next.js, Electron, Tailwind CSS

Achievements

- Selected among top students in the AlgoUniversity Accelerator; mentored by engineers from Google and Apple.
- Solved 1200+ DSA problems across coding platforms.
